Application/Control Number: 10/713,717

Art Unit: 2816

DETAILED ACTION

Claims 1-19 are presented in the instant application according to the Applicant's filing on 11/14/2003.

Specification Objection

1. The specification is objected to because of the following minor informalities:

Page 8, paragraph [0022], line 1, change "31" to --30--;

line 5, change "10" to --32--;

line 6, change "31" to --30--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3, 5, 16-17 and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Meltzer et al. (U.S. Pub. No. 2004/0223575).

Application/Control Number: 10/713,717

Art Unit: 2816

With respect to claim 1, Meltzer et al. discloses, in Fig. 1, a frequency synthesizer, comprising a phase locked loop including an analog mixer phase detector [13] (see US Pub. No. 2003/0058961, Fling et al., paragraph [0129], line 1, for the term "PLL mixer/phase detector"), and an auxiliary digital frequency detector [15] coupled to the phase locked loop.

With respect to claim 2, Meltzer et al. further discloses, in Fig. 1, a programmable divider [23] having an input terminal responsive to an output signal of the frequency synthesizer and having an output terminal coupled to an input terminal of the analog mixer phase detector [13]; a loop filter [27] having an input terminal coupled to an output terminal of the analog mixer phase detector, and a voltage controlled oscillator [11] having a control terminal coupled to an output terminal of the loop filter.

With respect to claim 3, Meltzer et al. discloses, in Fig. 1, that the analog mixer phase detector [13] is for detecting a phase difference between the output signal of the programmable divider and a reference signal [from 21].

With respect to claim 5, Meltzer et al. discloses, in Fig. 1, that the auxiliary digital frequency detector [15] has a first input terminal coupled to the output terminal of the programmable divider [23].

With respect to claim 16, Meltzer et al. discloses, in Fig. 1, a frequency synthesizer, comprising a phase locked loop including an analog mixer phase detector [13] (see US Pub. No. 2003/0058961, Fling et al., paragraph [0129], line 1, for the term "PLL mixer/phase detector"); and means [15] for making the analog mixer phase detector automatically acquire phase lock when the phase locked loop is out of lock.

Application/Control Number: 10/713,717

Art Unit: 2816

With respect to claim 17, Meltzer et al. further discloses, in Fig. 1, a programmable divider [23] having an input terminal responsive to an output signal of the frequency synthesizer and having an output terminal coupled to an input terminal of the analog mixer phase detector [13]; a loop filter [27] having an input terminal coupled to an output terminal of the analog mixer phase detector; and a voltage controlled oscillator [11] having a control terminal coupled to an output terminal of the loop filter.

With respect to claim 19, Meltzer et al. discloses, in Fig. 1, a frequency synthesizer including a voltage controlled oscillator [11], a loop filter [27], and an analog mixer phase detector [13] (see US Pub. No. 2003/0058961, Fling et al., paragraph [0129], line 1, for the term "PLL mixer/phase detector"), a method comprising adjusting the voltage applied to the voltage controlled oscillator from the loop filter until the frequency of an output signal of the analog mixer phase detector is within a pass-band of the loop filter.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meltzer et al. (U.S. Pub. No. 2004/0223575) in view of Hartman et al. (U.S. Patent No. 6,359,476).

With respect to claims 4 and 18, Meltzer et al. discloses all of the claimed limitations as expressly recited in claims 1-2 and 16-17, respectively. However, Meltzer et al. does not explicitly disclose the programmable divider being a direct digital synthesizer or including a

Art Unit: 2816

direct digital synthesizer; Hartman et al. discloses in column 6, line 27-28, that a direct digital synthesizer is essentially a digital frequency divider for providing an incremental resolution. To include a direct digital synthesizer in the programmable divider or to employ a direct digital synthesizer as a programmable divider within the frequency synthesizer of Meltzer et al. for providing frequency accuracy (see col. 5, line 51) would have been obvious to one of ordinary skills in the art at the time of the invention since including a direct digital synthesizer in the programmable divider or employing a direct digital synthesizer as a programmable divider has been well-known in the art as evident by the teachings of Hartman et al.

Allowable Subject Matter

- 5. Claims 6-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

 The closest prior art of record does not show or fairly suggest:
- a) A frequency synthesizer including a comparator being coupled between the output terminal of the programmable divider and the first input terminal of the auxiliary digital frequency detector, as called for in claim 6; and
- b) A frequency synthesizer including a differential integrator circuit having an input terminal responsive to an output signal of the auxiliary digital frequency detector, and in which an output terminal of the differential integrator circuit is coupled to the loop filter, as called for in claim 7.

Application/Control Number: 10/713,717 Page 6

Art Unit: 2816

Citation of Relevant Prior Art

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art Riley (U.S. Patent No. 6,404,291) discloses a linear low noise phase loop frequency synthesizer using controlled divider pulse widths.

Prior art Bogdan (U.S. Patent No. 5,910,753) discloses direct digital phase synthesis.

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Linh M. Nguyen whose telephone number is (571) 272-1749. The examiner can normally be reached on Alternate Mon, Tuesday - Friday from 7:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on (571) 272-1740. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
